

Basic and professional training in CBRN safety

OUR GOAL

Every day, emergency response services fight for our lives, our safety, and our future. The least we can do is provide them with the proper knowledge and skills to protect their lives and serve their communities

Our team offers years of experience and advanced international practices in the field of CBRN safety and civil protection.

Each training provides an individual expert approach, based on our core goal – improving cooperation in strengthening CBRN safety in both the public and private sectors, as well as our focus on prevention, preparedness, and response to CBRN threats.

TRAINING AND EDUCATION
