

# DHS Comprehensive Mine Action & Explosive Ordnance Disposal Services

We provide specialized solutions for areas affected by landmines and explosive remnants of war, combining technical expertise with community-focused approaches to create safer environments.

Our integrated services span from manual demining operations to explosive ordnance disposal, risk education, training, operational support, and expert consultancy. We maintain the highest safety standards while delivering effective solutions tailored to each unique context.

# Humanitarian Demining Operations

## Survey & Assessment

Conducting technical and non-technical surveys to identify contaminated areas and develop clearance strategies.

## Manual Clearance

Performing precise manual demining and clearance of explosive remnants of war using specialized techniques and equipment.

## Quality Assurance

Implementing rigorous quality assurance, control, and post-clearance verification to ensure land is safe for use.

## Battle Area Clearance

Specialized clearance of former combat zones to remove unexploded ordnance and other dangerous remnants.

# Explosive Ordnance Disposal (EOD)

## Detection

Using advanced technology to safely locate UXO and IEDs in affected areas.

## Identification

Expert assessment and classification of discovered explosive ordnance.

## Disposal

Controlled neutralization or detonation of explosive threats by specialized teams.

Our emergency response teams provide rapid deployment capabilities for urgent EOD needs. We maintain 24/7 readiness to address time-sensitive explosive threats, ensuring communities can quickly return to safety after discoveries of dangerous ordnance.

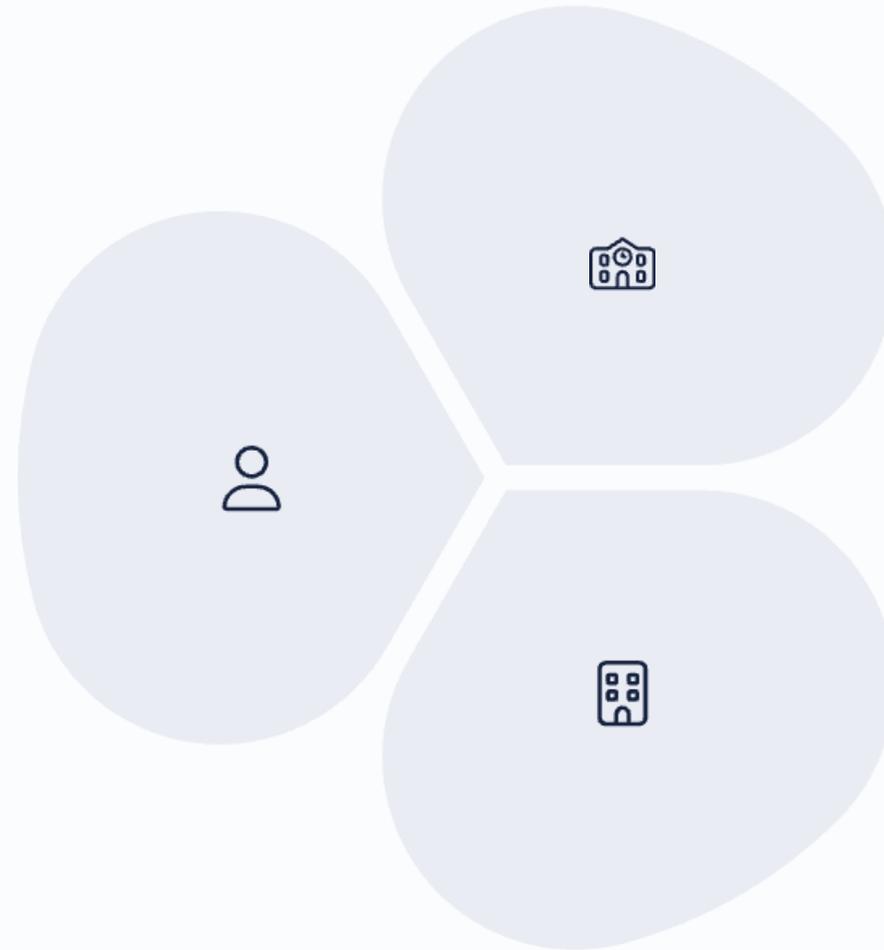

# Explosive Ordnance Risk Education (EORE)

## Community Campaigns

Engaging local populations through culturally appropriate risk education sessions.

## School Programs

Age-appropriate education for children and youth about explosive hazards.

## Authority Training

Specialized instruction for local officials, NGOs, and civil society organizations.

Our risk education initiatives are designed to create lasting behavioral change, empowering communities to recognize and avoid explosive hazards. We develop customized materials and approaches based on local contexts, ensuring information is accessible to all demographic groups.

# Training and Capacity Building

Our training programs focus on developing sustainable local capacity through comprehensive instruction in demining, EOD, and safety protocols. We implement train-the-trainer modules to ensure knowledge transfer continues after our departure.

Each training program is tailored to local conditions and challenges, incorporating international best practices while respecting cultural contexts and existing knowledge bases.

# Operational Support Services

## Operational Support Services

### Logistics Coordination

Comprehensive supply chain management for field operations, ensuring teams have necessary equipment and supplies in remote locations.

### Camp Management

Setup and maintenance of living facilities for remote teams, including power, water, and communications infrastructure.

### Fleet & Equipment

Management of specialized vehicles and technical equipment, including maintenance schedules and replacement planning.

### GIS & Data Analysis

Detailed mapping and data management services to track clearance progress and prioritize operations.

Our operational support capabilities enable demining teams to function effectively in challenging environments. We handle the complex logistics so technical specialists can focus on their critical safety work.

# Consultancy & Advisory Services

## Program Design

We develop customized mine action programs tailored to specific regional challenges and available resources. Our designs incorporate international best practices while addressing unique local contexts.

Each program includes detailed implementation plans, resource requirements, and timeline projections to ensure effective execution.

## Risk Assessment

Our expert teams conduct comprehensive risk evaluations to identify potential hazards and develop appropriate mitigation strategies. These assessments form the foundation for safe and effective operations.

We provide ongoing risk monitoring and adaptive management recommendations as conditions evolve.

## IMAS Compliance

We ensure all operations adhere to International Mine Action Standards, providing guidance on implementation and documentation requirements. Our advisors help navigate complex regulatory frameworks.

We assist with certification processes and quality management systems to maintain compliance.

# Specialized Equipment and Supplies

We provide comprehensive equipment solutions for all aspects of mine action. Our inventory includes state-of-the-art metal detectors, protective gear, field supplies, communication systems, and specialized support equipment.

All equipment meets or exceeds international safety standards and is selected for reliability in challenging field conditions. We offer training on proper use and maintenance of all supplied equipment to ensure operational effectiveness and longevity.
